Re: Adjunct Professor Opportunities

This is an important announcement from one of the CSCMP Chicago Roundtable Officers, Charlie Slutz, who is a Professor of Aviation and the Director of Transportation Administration at Lewis University in Romeoville, Illinois. Charlie also chairs our Education Committee for the Chicago Roundtable.

Lewis has recently introduced a new degree program. The **Bachelor of Science in Transportation Administration** is a modification to a long-standing program in Aviation Administration. Although it utilizes several of the courses from that program, there are eight new courses being introduced that reflect the expanded scope of the transportation field. Transportation majors will receive an introduction to logistics/supply chain management in several of the new courses and will be encouraged to pursue careers in those fields.

We have begun recruiting students for this program and now need to begin development of the first of these courses. I have developed and will be teaching a course called Principles of Physical Distribution in the spring semester in 2012, which starts this coming January. It is now time to begin development of at least two of the transportation courses. The first courses that will be scheduled are Motor Freight Administration and Railroad Administration. This communication is a call for applications for professionals currently employed in those fields who would like to develop and teach a three credit-hour course at the Romeoville campus.

We have considerable flexibility in the scheduling of class hours so as to accommodate most work schedules. Generally, working professionals have preferred a one evening a week schedule, for the fifteen weeks of the semester. Class would run for about 2.5 hours each week.

If you would like to apply for either of these teaching assignments, which will recur periodically depending on enrollment numbers, please submit your credentials to me at slutzch@lewisu.edu.

Additional courses that will be offered include Multi-modal Operations, as well as courses in Pipeline Operations, Energy Distribution, and Port Administration. If your experience is in any of these areas, please submit your credentials for future consideration.

Faculty rank and compensation are dependent on education and experience.

If you have any questions about the courses or the application process, please contact me at the above e-mail address.

Respectfully,

Charles S. Slutz, Professor of Aviation and Director of Transportation Administration
Lewis University
